

When Boom Cymru outgrew their existing premise they needed to relocate their head office to a new site to cater for the expansion of their operations.

Creating content for S4C, BBC Wales and ITV Wales, Boom Cymru's divisions include Fflic, Alfresco, Apollo, Boom Plant/Kids and Bulb; established and experienced brands that deliver children's, drama, entertainment, factual, factual entertainment, lifestyle and live events material.

Challenge

- Existing network connections were limiting the efficiency of business operations.
- Separate legacy phone systems were stand alone and not integrated causing internal communication issues.
- Integrate remote sites into a single unified network.

Solution

- Deployment of a fully managed MPLS network to link four core sites, with 500MB fibre circuits with resilient 100MB backup circuits.
- Resilient Managed Firewall solution hosted in the core MPLS network.
- Avaya IP Office IP Telephony solution for 300 users delivered over multiple sites.
- SIP Trunks delivered over the MPLS network solution to replace ISD lines.

Result

“Connexus have provided us with a robust and scalable network to meet our large bandwidth requirements and have revolutionised the way we move our large production files internally and externally. On top of this they manage all of our voice requirements with the Avaya IP Office and SIP trunking solution which has improved our communication and reduced our costs at the same time.”

Rhodri James - IT Director
